About Our Company

Accountant Ability is an automated tax preparation system built for Accounting Firms to speed up the tax preparation process

Accountant Ability aims to service **boutique-style and mid-size CPA firms** by automating the bottleneck of their workflow so that they are able to **10x current tax filing rate**, allowing them to service **more clients** and **boost revenue** while simultaneously reducing turnaround time and cost.

As of today, we have a **full end-to-end prototype ready** that supports W-2 filings. Additionally, we have done extensive **product validation** through customer interviews, and a **live demo with a CPA**, eager to use the product in their firm

Problem

Many small-to-mid size CPA firms face a hit a **plateau in growth** as **rising cost of labor** and turnaround time for taxes **limit the number of clients** they are able to take on.

Non-standardized Customer discovery revealed that CPAs are actively **cobbling together inefficient, DIY workarounds** for manual data entry, proving a **desperate need** for a **unified solution**.

Cost

The manual nature of tax preparation requires **massive human capital**. As labor costs rise, firms are resorting to **outsourcing** just to survive, rather than actually fixing the workflow

Climate

Ever-changing tax laws require CPAs to dedicate **massive bandwidth** to continuous education. Manual data entry compounds this cognitive load, turning an already difficult job into a recipe for **burnout and errors**.

Solution & Value Proposition

Accountant Ability **provides value** by **directly attacking the bottleneck** of CPA workflow by **building a bridge** between **raw documents** and legacy **preparation software** through **novel, sophisticated agentic workflows**

Unified Pipeline

We **replace** fragile "Shadow IT" and **DIY fixes** with a **standardized, plug-and-play integration**. We **automatically structure** the data and **push it natively** into **legacy systems**, **solving the problem** at its **root**

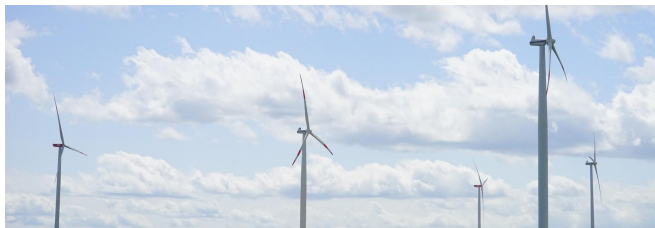

Cost

We **eliminate** the need for **expensive manual data entry** and **outsourcing**. Our **highly scalable** automation **protects profitability**, allowing firms to process **more returns without increasing headcount**.

Climate

By **offloading** the **cognitive drain** of manual extraction to our **agentic AI**, we **free** up valuable time for **CPAs** to focus on what actually **drives revenue**: high-value strategic advisory, continuous education, and error-free compliance.

Solution & Value Proposition

Show that we offer a solution that solves the problems previously described and identified. Make sure that the solutions we offer uphold the values of effectiveness, efficiency, and are highly relevant to the market situation and society.

Market

Uphold the spirit of innovation and creativity in shaping a solution that can be accepted by the wider community.

SEM

Give an explanation that the solutions offered are based on data and analysis that are very precise and focus on the problem.

Industry

The solutions offered need to be based on sound market decisions so that they can have an impact.

End User

The solutions offered need to be based on sound market decisions so that they can have impact.

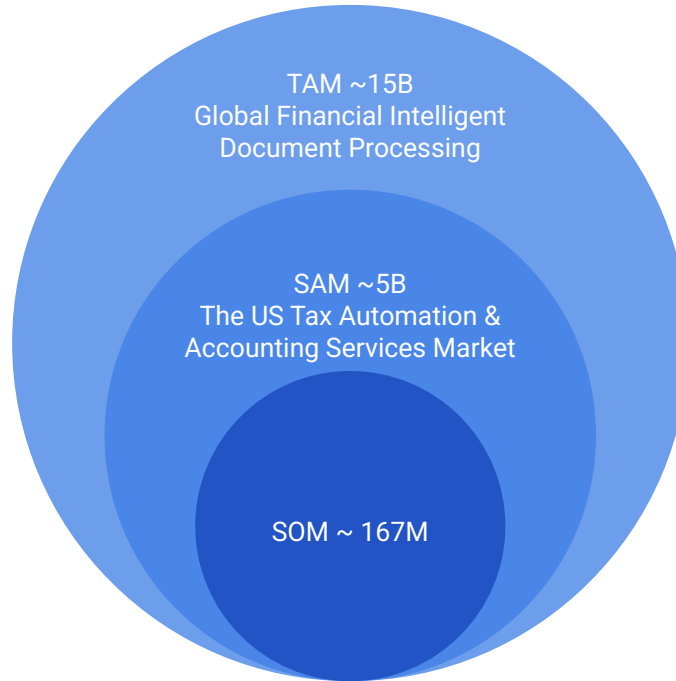

Target Market

Customer v. User - Our customer is the **CPA firm heads**, those who make financial decisions on behalf of the firm, who delegate the use of this tool to the **end users (employees/tax preparers)**, but may also **use it themselves**

GTM - Our go-to-market strategy has two phases:

1. **Building Case Study** - we will build a **verifiable, metrics-driven ROI case study** with our pilot customer to **boost credibility**, a driving growth factor in this space
2. **Attend our marketplace** - as speakers/presenters we will attend **CPA conferences and learning centers** like CalCPA to target our **beachhead (independent CPAs)** directly, as well as online marketing through SEO optimization

Insights - through **customer interviews** with tax preparers and CPAs we learned that, though this tool is desired, **reducing and eliminating friction** when integrating is paramount

Values calculated for TAM, SAM, and SOM are linked in this document:

[Value Calculation](#)

Total Available Market (TAM)

15 Billion

Global Financial Intelligent Document Processing (\$15B+). Automating the extraction, queuing, and API payload delivery for tax, audit, wealth management, and loan origination globally.

Serviceable Available Market (SAM)

5 Billion

The US Tax Automation & Accounting Services Market (~\$5 Billion). Based on 200M+ annual returns monetized via per-return transactional pricing.

Serviceable Obtainable Market(SOM)

167 Million

US Independent firm to mid-size firm CPA Tax Preparation

Core Technology

1. Agentic Workflow - takes, extracts, and parses tax data into readable schemas

2. Secure Document Queuing Structure - secure storage to queue documents for transfer

3. Sophisticated Link to Tax Prep Software - software link to tax preparation API to parse payload into tax forms

Unique (The "Why Us" Factor)

- CPA-Centric Architecture: Purpose-built, multi-tenant queues designed specifically to handle the high-volume, chaotic reality of tax season.

Defensible (Our Moat)

- **The Legacy Integration Moat:** Building reliable bridges into notoriously difficult legacy tax APIs (like Lacerte) creates a massive technical barrier to entry for competitors.

- **Compounding Data Advantage:** Our proprietary agentic schemas become hyper-specialized and increasingly accurate with every edge-case document processed.

- **High Switching Costs:** Once embedded in a firm's daily workflow, the immediate ROI makes ripping out our software a major operational risk for CPAs.

Business Model

1. Revenue Model & Rationale (How we make money & why it fits)

- **Model:** Tiered Volume SaaS with **Metered Overages**.
- **The Structure:** A freemium trial, followed by tiers based on **filing volume** (e.g., \$X/month for up to 500 returns, plus \$Y per additional return).
- **Customer Rationale:** Highly cyclical demand. CPA firms **scale up** their tier during **peak tax season** (Jan–April) and downgrade in the off-season. This aligns our pricing directly with their seasonal cash flow.
- **Cost Rationale:** Our primary COGS (Cost of Goods Sold) are **API maintenance**, **cloud queuing storage**, and **compute power** for the Agentic Workflow. Tiered pricing ensures our fixed server costs are covered year-round.

3. Validation & Next Steps

Validation: Currently speaking with CPA firms who have shown demonstrated interest in the product, iterating based on product and user feedback.

Next Steps: Finalize prototype and start pilot testing with our beachhead customer.

2. Market Drivers (Current & Future)

- **The Talent Crisis:** The accounting industry is facing a **massive shortage of CPAs** and **high burnout rates**. Firms **must automate** to survive.
- **Technological Lag:** Legacy tax software (like Lacerte) lacks native, modern AI capabilities.
- **Regulatory Complexity:** Increasing tax code complexity drives more individuals and businesses to use CPA firms rather than **DIY software**, increasing our clients' document volume.

4. Resources Needed & Timeline

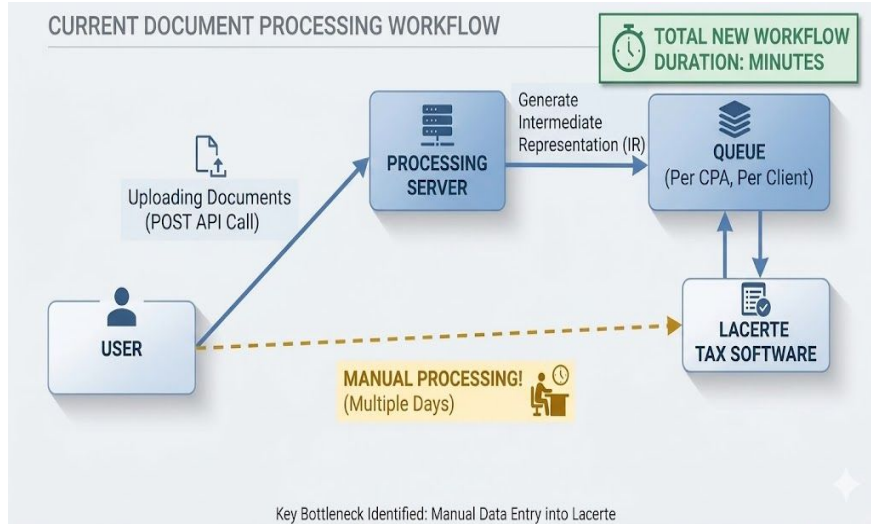

Financial Resources: \$10,000 in pre-seed funding

Material/Human Resources: Cloud infrastructure credits, scaling costs, Lacerte enterprise licenses, customer acquisition and marketing

Timeline: Beta Testing: Summer/Fall 2026

Full Commercial Launch: Ready for 2027 Tax Season

Use Case Scenario

This workflow highlights the **value proposition** and use case of Accountant Ability and how it would be used

- scales to support **EVERY tax document** IRS requires
- **high performance** in demo shows strength in technological foundation
- **seamless integration** to workflow **eliminates friction** for customers

Key Target Customer Characteristics/Needs:

- Independent Accounting practices anywhere from **1-20 employees**
- Firms trying to **scale their business** by **decreasing turnaround time** for filings

Specific Benefits:

- **Increase revenue** by taking on more clients by **increasing tax filing rate**
- Firms trying to scale their business by decreasing turnaround time for filings

Prospective Customer Feedback

- “Product sounds great, but would need to see others using it to assess the value gained”
- “Would like to use product but we already have 5 other tools part of our workflow, would this be worth it?”

Competitive Comparison

Tech giants

Intuit, Thomson Reuters

Creators of legacy software (Lacerte, UltraTax). Massive distribution, but have technical debt and closed ecosystems.

How we compare

- Giants build for enterprises or DIY consumers (TurboTax).
- **Platform-agnostic:** we can seamlessly switch between different filing platforms

Direct Startups

Fast moving startups

Agile LLM tools focused solely on document extraction, leaving the CPA to figure out how to import the data.

How we compare

- We handle the dirty, integration work that other AI startups avoid (legacy tax software integrations)
- Our **domain knowledge** puts us a **step ahead** of potential entrants

Accountant Ability

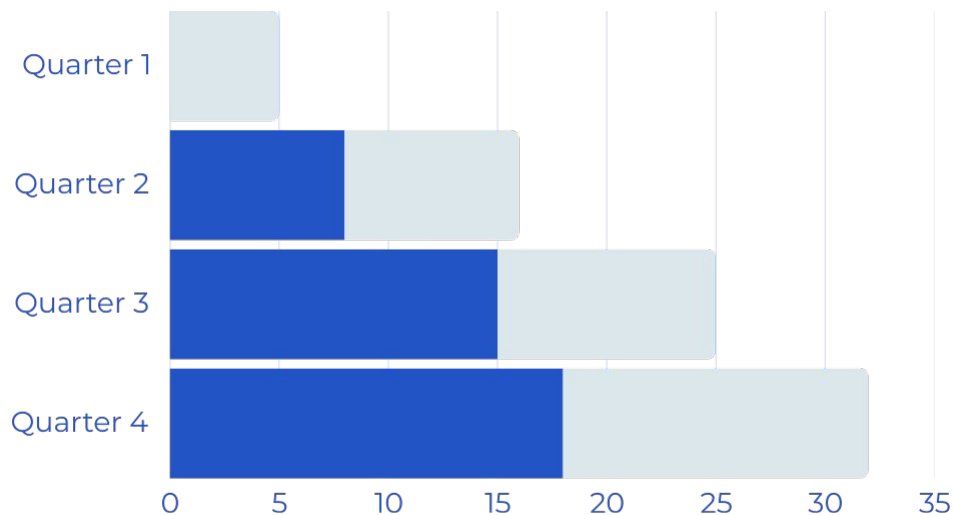

Point of Differentiation

Agile LLM tools focused solely on document extraction, leaving the CPA to figure out how to import the data.

Our Advantage

- **Dedicated team** with **domain advantage**
- **Connections** with accountants provide **unique product distribution**, putting us **ahead of startups** entering this space
- With rapid product iteration and **white-glove implementation**, we are able to **target market** that giants can't

Milestones

Current Accomplishments

Validated Market Demand: Admitted to the preeminent UC Davis **PLASMA accelerator**, enabling extensive **CPA customer discovery** that confirmed the **acute need** for our automated workflow.

Proven Core Technology: Successfully completed our end-to-end **Technical Proof of Concept (PoC)**, validating our value proposition

Secured Initial Adoption (LOI): Signed a **Letter of Intent (LOI)** and secured a beta-testing partnership with a reputable CPA firm to implement our product and build our flagship case study.

Unlocked Integrations: Secured micro-funding through the UC Davis Entrepreneurship-in-Residence **(EIR) program** to acquire **essential API keys** and begin integration development.

Key Uncertainties & 9-12 Month Timeline

Uncertainty 1: Legacy API Stability. Can we build a reliable bridge into existing tax prep software?

- **Milestone (Months 1-3):** Finalize and stress-test the bi-directional API integration with Lacerte using our secured developer keys **(COMPLETE)**.

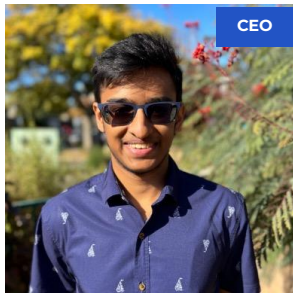

Uncertainty 2: Real-World Accuracy & Trust. Will our agentic schemas hold up against chaotic, real-world tax season data without hallucinating?

- **Milestone (Months 4-6): Execute our closed beta** with our **pilot CPA partner**. This acts as our primary experiment to refine edge-case data schemas and prove complete data security.

Uncertainty 3: Commercial Scalability. Will CPA firms pay for this and adopt it seamlessly?

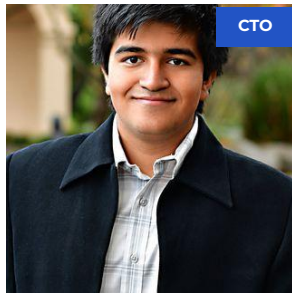

- **Milestone (Months 7-12):** Convert our beta partner to a paid contract, **publish our validated ROI case study**/testimonial, and **launch self-serve onboarding** to acquire our next 10 paying firms.

Our Team

Soham Kolhatkar

Cofounder, Head Developer for agentic framework. Extensive product and customer validation, getting customer and investor contacts

Divyansh Rajesh Jain

Co-founder, Head developer for all tax software integrations. Building bridge between agent and tax preparation. Main contact with pilot customer

Nidhi Jain, CPA

Veteran CPA, head of firm, product advisor, beach head customer. Instrumental in product refinement through key feedback and insights. Direct pipeline to market through connections to customers and conferences

Next Steps

Recap:

The Core Problem: Mid-sized and boutique CPA firms are constrained by a **severe industry-wide talent shortage** and the **massive operational bottleneck** of manual data entry during tax season.

Our Proven Solution: Engineered a platform utilizing a proprietary Agentic Workflow and secure multi-tenant queuing. It completely automates ingestion, extraction, and structuring of raw client documents and bridges into legacy tax software (e.g., Lacerte), turning **days of manual work** into **minutes of automated processing**.

Validation to Date: Conducted **in-depth customer discovery** interviews with our target CPA demographic, to understand motivation and incentives to adopting new tools. We have created an **end-to-end prototype** that received **positive feedback** from pilot customer during demo.

What's Next?

Short-Term (Next 6 Months): **Scale our demo** to support all IRS tax forms and **integrate** with the most popular tax preparation tools. We will launch a **closed beta with our pilot CPA** firm to battle-test the data pipeline during real-world tax workflows, **build a case-study+testimonials** to boost credibility, and refine our GTM strategy.

Long-Term (12-18 Months): Following a successful beta, we will **scale our GTM strategy**, launch full self-serve onboarding, and attend CPA conferences as speakers and CPA training centers to interact with our market directly. We can then expand the product to tax planning, to grow revenue in non-tax seasons.

Funding: Raising \$10,000 to execute our GTM strategy. This includes **compute costs** for maintaining our **agentic backend and api integrations** and **labor costs** for customer acquisition and our **first commercial launch**.

Let's Build the Future of Financial Automation
